Duration	7 mins 16 secs
Grade	**15.00** out of 15.00 (**100**%)

Question **1**
Correct
Mark 1.00 out of 1.00
Flag question

Which of the following is a conventional searching technique?

● a. Linear search ✓
○ b. Dynamic search
○ c. Binary search
○ d. Hashing

Question **2**
Correct
Mark 1.00 out of 1.00
Flag question

What happens when the element is found in linear search?

● a. The search stops immediately ✓
○ b. The search backtracks to find duplicate elements
○ c. The search continues until the end of the list
○ d. The search starts over from the beginning

Question **3**
Correct
Mark 1.00 out of 1.00
Flag question

During a binary search, what happens if the target element matches the middle element?

○ a. The search continues in the left sublist
● b. The search ends successfully ✓
○ c. The search continues in the right sublist
○ d. The list is sorted

Question **4**
Correct
Mark 1.00 out of 1.00
Flag question

In binary search, if the target element is less than the middle element, where does the search continue?

● a. In the left sublist ✓
○ b. In the entire list
○ c. At the beginning of the list
○ d. In the right sublist

Question **5**
Correct
Mark 1.00 out of 1.00
Flag question

In a linear search, how many comparisons are made in the worst-case scenario to find an element in a list of size n?

○ a. n/2
● b. n ✓
○ c. 1
○ d. log n

Question **6**
Correct
Mark 1.00 out of 1.00
Flag question

What is the key characteristic of binary search?

● a. It can be applied only if the list is sorted ✓
○ b. It always starts from the beginning of the list
○ c. It compares elements sequentially
○ d. It works on unsorted lists

Question **7**
Correct
Mark 1.00 out of 1.00
Flag question

Which of the following is not a limitation of binary search algorithm?

● a. Binary search algorithm is not efficient when the data elements more than 1500 ✓
○ b. There must be a mechanism to access middle element directly
○ c. Requirement of sorted array is expensive when a lot of insertion and deletions are needed
○ d. Must use a sorted array

Question **8**
Correct
Mark 1.00 out of 1.00
Flag question

In linear search, if the target element is not found in the list, what is the result?

○ a. An error is raised
○ b. The first element is returned
○ c. The last element is returned
● d. The search is considered unsuccessful ✓

Question **9**
Correct
Mark 1.00 out of 1.00
Flag question

What is the advantage of binary search over linear search?

○ a. Binary search can find multiple instances of the target element
○ b. Binary search does not require dividing the list
● c. Binary search has a lower time complexity on large, sorted lists ✓
○ d. Binary search works on unsorted lists

Question **10**
Correct
Mark 1.00 out of 1.00
Flag question

__________ search takes a sorted/ordered list and divides it in the middle.

○ a. Linear
○ b. Both (1) & (3)
● c. Binary ✓
○ d. Hash

Question **11**
Correct
Mark 1.00 out of 1.00
Flag question

In ___________ checks the elements of a list, one at a time, without skipping any element.

○ a. Both (1) & (3)
● b. Linear search ✓
○ c. Binary search
○ d. Hash search

Question **12**
Correct
Mark 1.00 out of 1.00
Flag question

In the context of searching, what is a successful search?

● a. When the element is found in the list ✓
○ b. When the list is sorted
○ c. When the list contains duplicate elements
○ d. When the search algorithm finishes

Question **13**
Correct
Mark 1.00 out of 1.00
Flag question

The average case occurs in the linear search algorithm

○ a. Item is the last element in the array or item is not there at all
○ b. When the item is not the array at all
○ c. When the item is the last element in the array
● d. When the item is somewhere in the middle of the array ✓

Question **14**
Correct
Mark 1.00 out of 1.00
Flag question

Which method of searching involves sequentially comparing each element until a match is found?

○ a. Jump search
○ b. Hashing
○ c. Binary search
● d. Linear search ✓

Question **15**
Correct
Mark 1.00 out of 1.00
Flag question

___________sort is the simplest sorting algorithm that works by repeatedly swapping the adjacent elements in case they are unordered in n-1 passes.

○ a. Complexity
○ b. Insertion
○ c. Selection
● d. Bubble ✓
