Completed	Sunday, 18 October 2026, 2:00 PM
Duration	3 mins 10 secs
Grade	**15.00** out of 15.00 (**100**%)

Question **1**
Complete
Mark 1.00 out of 1.00
Flag question

Which sorting algorithm involves comparing elements and swapping adjacent items that are out of order?

○ a. Linear Search
● b. Bubble Sort
○ c. Merge Sort
○ d. Binary Search

The correct answer is: Bubble Sort

Question **2**
Complete
Mark 1.00 out of 1.00
Flag question

What type of problems can sorting help solve efficiently?

● a. All of the above
○ b. Duplicates
○ c. Selection
○ d. Searching

The correct answer is: All of the above

Question **3**
Complete
Mark 1.00 out of 1.00
Flag question

Which sorting algorithm would be preferred for its divide-and-conquer approach?

○ a. Binary Search
○ b. Bubble Sort
○ c. Linear Search
● d. Merge Sort

The correct answer is: Merge Sort

Question **4**
Complete
Mark 1.00 out of 1.00
Flag question

_______is putting an element in the appropriate place in a sorted list yields a larger sorted order list.

○ a. Extraction
● b. Insertion
○ c. Selection
○ d. Distribution

The correct answer is:
Insertion

Question **5**
Complete
Mark 1.00 out of 1.00
Flag question

What is one of the key advantages of using the built-in sorted() function in Python?

○ a. It only works with integer arrays
● b. It sorts data out of the box efficiently
○ c. It requires external libraries
○ d. It is less efficient than custom sorting algorithms

The correct answer is: It sorts data out of the box efficiently

Question **6**
Complete
Mark 1.00 out of 1.00
Flag question

What is sorting in the context of computer science?

○ a. Deleting data from a list
○ b. Inserting data into a list
○ c. Searching for data in a list
● d. Arranging data in a particular format

The correct answer is: Arranging data in a particular format

Question **7**
Complete
Mark 1.00 out of 1.00
Flag question

Which of the following best describes the process of Merge Sort?

○ a. It repeatedly finds the minimum element and moves it to the sorted part of the list
○ b. It builds a sorted array one element at a time
● c. It divides the list into two halves, sorts each half, and then merges them
○ d. It compares adjacent elements and swaps them if necessary

The correct answer is: It divides the list into two halves, sorts each half, and then merges them

Question **8**
Complete
Mark 1.00 out of 1.00
Flag question

In the context of sorting, what does the divide-and-conquer approach involve?

○ a. Sorting data sequentially
○ b. Sorting data in a single pass
○ c. Rearranging data without sorting
● d. Dividing the input into parts, solving each part, and combining the solutions

The correct answer is: Dividing the input into parts, solving each part, and combining the solutions

Question **9**
Complete
Mark 1.00 out of 1.00
Flag question

Why is sorting important for selection operations?

○ a. It makes the data unsorted
○ b. It complicates the selection of items
● c. It makes it easier to select items based on their relationship to the rest of the items
○ d. It slows down the process

The correct answer is: It makes it easier to select items based on their relationship to the rest of the items

Question **10**
Complete
Mark 1.00 out of 1.00
Flag question

What is one of the first steps in a divide-and-conquer algorithm like Merge Sort?

○ a. Comparing each element with the others
○ b. Sorting the entire list sequentially
● c. Dividing the input into smaller subproblems
○ d. Combining sorted sublists

The correct answer is: Dividing the input into smaller subproblems

Question **11**
Complete
Mark 1.00 out of 1.00
Flag question

What is the primary advantage of the divide-and-conquer approach in sorting algorithms?

● a. It allows for efficient parallel processing and sorting of data
○ b. It only works on small datasets
○ c. It simplifies the sorting process by using only one pass
○ d. It avoids the need for recursion

The correct answer is: It allows for efficient parallel processing and sorting of data

Question **12**
Complete
Mark 1.00 out of 1.00
Flag question

__________ explain how an algorithm will perform when the input grows larger.

○ a. Sorting
○ b. Searching
● c. Complexity
○ d. Merging

The correct answer is:
Complexity

Question **13**
Complete
Mark 1.00 out of 1.00
Flag question

Which of the following best describes the term "sorting" in computer science?

● a. Arranging data in a specific order
○ b. Removing duplicates from a list
○ c. Finding a specific element in a list
○ d. Merging two datasets

The correct answer is: Arranging data in a specific order

Question **14**
Complete
Mark 1.00 out of 1.00
Flag question

What is the primary benefit of using sorting algorithms in programming?

○ a. Decreases the efficiency of algorithms
● b. Provides a basis for other algorithms to work efficiently
○ c. Makes data harder to manage
○ d. Makes code execution slower

The correct answer is: Provides a basis for other algorithms to work efficiently

Question **15**
Complete
Mark 1.00 out of 1.00
Flag question

Which algorithm is efficient for analyzing the frequency distribution of items in a list?

○ a. Linear Search
○ b. Quick Sort
● c. Merge Sort
○ d. Bubble Sort

The correct answer is: Merge Sort
